

# BIODS 215: Class project proposal

Yosuke Tanigawa, Manuel Rivas, Julia Salzman, and James Zou

Due: 2018/1/25

Please briefly describe your proposal for the class project. Specifically, your proposal should include:

- Research question and/or objective(s)
- Dataset
- Types of statistical and/or deep learning models in your mind (if possible)
  - If you can include specific models, that would help us to provide you some feedback.
  - It might be hard for students to narrow down a specific model because we haven't covered the most of the materials yet. In that case, we would strongly recommend to come to office hour or contact with TA. We are happy to help you.

This assignment is meant to help you to jump start the class project and secure some time to work with data in the rest of the quarter. 1-2 pages of brief description of the project is totally fine for this assignments.

Note: For audits, all the assignments are optional. You may still submit homeworks & projects, but we will prioritize students when providing feedbacks (if our resources get busy).
